

Altered ER Diagram

- Attribute Author was added to Item – so now DVD has also Author

We have library, which has some librarians and timetable. We cannot have librarian without Day. Library has name and it is identifier. Address which is structured. Day have name and identifier name. Librarian is Person. Person has some basic attributes and we use username as identifier. Book can follow previous episode of book so recursive relationship is present. Piece is weak entity. Identifier is piece number and serial number together. Item have some amount of it's pieces and they can have different price. Each piece has piece number. In the end is piece present.
